**Keoki Jackson** (USA)  
Vice President, Supply Chain & Program Performance, Lockheed Martin

**Professor Russell Boyce**, Chair for Space Engineering at UNSW Canberra and Chair COSPAR 2021

**Elanor Huntington**, Dean of the College of Engineering and Computer Science at the Australian National University (ANU)

**SYNOPSIS:** The Leadership Forum is perfectly tailored for COSPAR 2021 participants.

Leadership is a set of attitudes and behaviours that can be learned, developed and demonstrated in all aspects of our lives. As very technically competent professionals, leadership capability and competencies start to become the key differentiator for those of us who seek to expand our careers and increase our sphere of influence.

While we can spend a lifetime discussing, reflecting on, and learning about leadership in its many variations and nuances,

- What do you do to achieve the best balance between management and leadership in your role?
- How you have demonstrated leadership strength in your role?
- What advice would you give to COSPAR 2021 participants to develop their leadership strength over their career?
- What do you believe are the greatest challenges for tomorrow's leaders in the space research sector?

Moderator Darryl Krook will pose some challenging questions to each of the participants, which form the basis of the Panel Session.
